
Start
Initialize Program
Includes, std, DEFINE INF
Input n & Validate
Get 'n'. End if n is <1 or >20
Initialize Matrix & Variables
Set 'cost' matrix from input (0=INF)
Initialize 'visited' [0]=1, 'edges'=0, 'totalCost'=0
Print Links Header
Print 'Selected links:"
Find Next Edge Loop
Is 'edges' < 'n-1'?
NO
YES
Reset Search Params
Reset minCost, u, v
Find Best Edge
Find unvisited node 'v' connected to visited node 'u' with minimum edge weight.
Validate Best Edge
Is a valid edge (u!=-1) found?
NO
YES
Print Connection Error & Exit
Print 'Cannot connect all'
End Program
Update & Print Link
Mark 'v' visited, edges++, add cost to totalCost
Print link 'u'-'v' with cost
Print Total Cost & End
Print 'Min total cable cost'
End
