ALGORITHM

Step 1: Start the program.

Step 2: Define a node structure containing data, a left pointer, and a right pointer.

Step 3: Create the binary tree by inserting nodes.

Step 4: Display the original binary tree using inorder traversal.

Step 5: Call the mirror() function recursively.

Step 6: Interchange the left and right children of each node.

Step 7: Apply the mirror operation recursively to the left and right subtrees.

Step 8: Display the mirrored binary tree using inorder traversal.

Step 9: Stop the program.
